

Existing Systems & Landscape

COTRA already runs multiple platforms across operations. The gap is in the **decision layer** that should connect them.

LIVE SYSTEM WALKTHROUGH

Orders

We will now switch to the live dispatcher workbench and walk through the Order Queue
— how incoming vehicle orders are received, prioritised and prepared for dispatch.

AI-Assisted Planner — Rules-Driven Route Planning

Truck Rules

Per-truck operational limits

- ▶ Deck position & configuration (upper / lower)
- ▶ Height limits per slot (e.g. 1.55m upper deck)
- ▶ Weight limits & axle balance
- ▶ Loading sequence (LIFO by stop order)

Route Rules

Shared constraints for every route

- ▶ Route geography & dealer sequence
- ▶ Split-route & transfer leg logic
- ▶ Country compliance (CH 4.0m / EU 4.3m)
- ▶ Example: Route 2 → Geneva → Lucerne

AI-Assisted Planner

Combines all four rule sets to auto-plan routes, trucks & deck loading — flagging violations before dispatch.

Driver Rules

Duty & assignment limits

- ▶ Driver availability
- ▶ Max working hours / day
- ▶ Remaining hours before rest
- ▶ Truck pairing & legal rest compliance

Vehicle Rules

Constraints

- ▶ Staging lane allocation
- ▶ Lane capacity & vehicle sequence
- ▶ Loading schedule & yard prep time
- ▶ Vehicle location tracking

LIVE SYSTEM WALKTHROUGH

Route Planner

We will now demonstrate the Route Planner — selecting a truck, auto-planning a route, arranging the deck, and reviewing the lane loading plan generated by the system.

Dashboard 2 — Truck Dispatch Timeline

End-to-end visibility of every truck's progress through the dispatch lifecycle, plus dispatcher planning performance.

● TRUCK TIMELINES

● DISPATCHER PLANNING PERFORMANCE

DISPATCHER	TRUCK NUMBER	PLANNING TIME (MINS)
Hans Weber	TRK-021	12 min
Klaus Zimmermann	TRK-041	8 min
Maria Schneider	TRK-031	22 min
Peter Brunner	TRK-025	38 min
Hans Weber	TRK-027	19 min
